

# CDS 130-001 Computing for Scientists

## Final Exam - Sample Final Exam

Dec. 08, 2011

This is a closed-book closed-computer exam. Calculators are allowed. You should show your work and the answer on the space provided immediately following or beside each question on the exam sheets. If additional space is needed, please use the back of the paper and indicate such usage.

1. Convert  $100111_2$  to its base ten equivalent using the template method
2. Convert  $109_{10}$  to its binary equivalent using either the template method or long-division method.
3. Carry out the binary addition of  $11101_2 + 01101_2$ ? Keep your operation and answer in binary format.
4. Carry out the binary multiplication of  $110_2 \times 101_2$ ? Keep your operation and answer in binary format
5. What is the decimal value of  $135_{16}$ ?
6. Use ASCII code to encode the string "JOBS" into a binary sequence. Express each character in a 8-bit binary number.
7. In the image below, four NANDS are connected and three of the inputs are set to 1. What are the values of Z and output if  $B = 0$  and  $A = 0$ ?

8. Fill out the logic table corresponding to the Logic Circuit shown below, which consists of a NAND gate and an NOR gate. Show all input bit pattern combinations A, B and C in the table. For each input bit pattern combination, calculate the corresponding output.

A	B	C	Output

9. Considering the following iteration code, what is A(5)?

```
A(1)=5;
for i=[2:5]
    A(i)=A(i-1)+3;
end
```

10. (a) Translate the following statement into a mathematical model.

(b) Then Translate your mathematical model into MATLAB programming code. Your code should be able to calculate the balance from year 1 to year 10. There is no need of doing the calculation in the exam. Only MATLAB code is needed.

My bank offers 2.5% interest on my account compounded yearly. Every year I deposit an additional \$1000. Assuming that on the first year your account had a balance of \$2000.

11. Write down the mathematic model of the following scientific model. Note that you need to use two iterative mathematic equations.

- The birth rate of rabbits is 50%. The death rate of rabbits is 0.02 times the number of rabbits multiplied by the number of foxes.
- The death rate of foxes is 10%. The birth rate of foxes is 0.001 times the number of foxes multiplied by the number foxes

12. For any give data array "array", what are the differences of the output on a plot window when the Matlab code "plot(array,'-r')" and the code "plot(array,'--ob')" are executed?

13. Briefly answer the following questions?

(a) What is iteration?

(b) what is algorithm?

(c) What is initial condition?

(d) What are the pros and cons if a smaller sub-interval is used in the iterative calculation?

14 Convert the following differential equation into a mathematic model expressed in an iterative equation?

$$\frac{dP}{dt} = 2(P - 1)$$

15.

$$f(x) = x^3$$
$$F = \int_0^{4.0} x^3 dx$$

Consider the integration of the function,  $f(x)=x^3$ , from the interval of  $x=0$  to  $x=4.0$ . You are asked to make a numerical approximation of this integration using the rectangle method, that is to find the geometric area underneath the function with the sum of a series of rectangles. If you choose the sub-interval  $x=1.0$ , what is the approximated integration result?

16. One creates a 2-D array in Matlab using the following statement:

```
>a=[3, 3, 3, 3; 1, 2, 3, 4; 4, 4, 4, 4; 5, 6, 7, 8]
```

How many rows in this 2-D array? What is value of  $a(3,2)$ ? What is  $a(2,3)$ ?

17. What is the array "a" after executing the following Double-nested For Loops?

```
for i=[1:3]
    for j=[1:3]
        a(i,j)=i*j+2;
    end
end
```

18. What is the array "A" after executing the following Double-nested For Loops?

```
A = [1, 2, 3; 4, 5, 6; 7, 8, 9];  
for m = [1:3]  
    for n = [1:3]  
        A(m,n) = m*n + 1;  
    end  
end
```

19. What final value of c is printed out?

```
c = 1;  
a = 1;  
b = 2;  
if(a + b < 3)  
    c = c + 1;  
end  
c
```

20. What final value of a, b, c is printed out?

```
a = 4;  
b = 3;  
c = 10;  
if ( a < b && a < c)  
    a = a + b + c;  
end  
a  
  
if (a < b || a < c)  
    a = a + b + c;  
end  
a  
b  
c
```

21: Does a usual scientific data set have color or not, such as temperature data? Why is color used in visualization?

22. Describe the colors represented by the following [R, G, B] values

- (1) [0, 0, 0]
- (2) [1, 1, 1]
- (3) [0.3, 0.3, 0.3]
- (4) [1, 1, 0]
- (5) [0, 1, 1]

23. For the following image and colormap,

```
MyImage=[1 2 3;
         4 5 6;
         7 8 9]
MyColorMap=[ 1 1 1;
            0.5 0.5 0.5;
            0 0 0]
```

- (1) What is the color of the pixel MyImage(1,1)?
- (2) What is the color of the pixel MyImage(1,3)?

24. Briefly describe the functionality of "plot()" and "imagesc()" methods in MATLAB?

25. Write a MATLAB program to visualize the height plot of the following 2-D function (only the algorithm matters, syntax errors will not be graded). The X-interval is from -2.0 to +2.0 and sub-interval is 0.1, and the Y-interval is from -2.0 to +2.0 and the subinterval is 0.1

$$f(x, y) = (x + y)^2$$

26. List at least three statistical measures? What are their corresponding functional names in MATLAB?

27. What is plotted along the X-axis of a histogram? What is plotted along the Y-axis?

28. What does regression mean? What does it mean if the correlation coefficient R is equal to one?
